Day 1 task

Now I am making market place for my given template in Hackathon 2 which is furniture business.

My market place type is "General E-commerce".

### Business Goal:

This will be a market place where customers can browse, compare and purchase furniture products.

### Problem:

Finding quality furniture at competitive price always time consuming and inconvenient. Additionally different types of seller and manufacturers confused to find an online platform to showcase their products.

### Solution:

My marketplace connects furniture sellers with customers in an efficient, user-friendly manner. A platform for browsing, ~~show~~ customization and purchasing furniture.
